

Integration Mind

Integration services made easy.

London, March 9th 2008 – Global phone billing company PasswordByPhone signed an agreement with integration specialists Integration Mind to aid webmasters to fully capitalize on the processor's geo-targeted billing platform with total global reach.

PasswordbyPhone opens up a global billing to adult sites in over 240 countries using a pay-per call solution, enabling a user to obtain a password to an adult site without the need for credit cards, dialers, downloads or simultaneous phone line connections.

Integration Mind, with over ten years experience in adult billing integration, has collaborated with PasswordByPhone to offer quick and hassle free integration to new clients as well as to aid current clients to use PasswordByPhone in a more optimum way.

Integration Mind has worked with some top billers in the adult business as well as has an extensive knowledge of NATS and other similar programs.

PasswordByPhone understands that the single BIGGEST roadblock for many billers is the integration process.

This process can be confusion, time consuming and costly.

Previously, a PasswordByPhone client had to learn the biller's API scripts, configure postbacks and configure password management.

To a biller, a slow integration process can cost money and can be the difference between having and losing a potential client.

Integration Mind aims to bridge the gap between PasswordByPhone's new client's integration needs as well optimizing current client's setup.

The technicians at Integration Mind have developed a simple integration system specifically designed for PasswordByPhone.

This system can have an adult site up and integrated as quickly as in a matter of hours.

Integration Mind's integration team is very experienced in integrating with many of the top billing companies used by the adult industry.

This collaboration between PasswordByPhone and Integration Mind literally means that clients only have to provide some small facts about the setup of their site and the team at Integration Mind does the rest.
